PROJECT TITLE:
LanguageBoost – SDG-4

NAME :
MUHAMMAD ARIF BIN MOHD SAYUTI

MATRIC NUMBER:
A212014

TTTM2213
MOBILE APP DEVOLEPMENT

Problem Statement:

Problem : The primary challenge in modern digital learning is the high rate of learner attrition caused by traditional content delivery that feels boring and overwhelming. Without clear daily objectives, real-time feedback, or social interaction, students often lose the drive to complete their educational goals, directly impacting the global objective of providing quality education for all (SDG 4).

Solution : This project addresses these issues by replacing stagnant learning models with a gamified mobile application. By integrating daily time based goals, and a social 'Friend' system, the app solves the problem of student disengagement and creates a motivated community of learners.

Peer Review Report:

Peer Review Report: MUHAMMAD ADIB NURMAN BIN ZAIDI SHAM (A212263)

The Job Finder app is a compelling project that directly addresses SDG 1 (No Poverty) by tackling the fundamental challenge of connecting low-income individuals with sustainable employment opportunities. By creating a streamlined platform where users can easily browse and apply for roles tailored to their skill sets, the student has developed a practical engine for economic mobility and financial independence. Throughout the demonstration, the UI/UX exhibits exceptional consistency, utilizing a professional and empowering color palette that adheres to Material Design principles to create a sense of trust and reliability. The navigation flow is logically structured across the core screens, with the video showcasing smooth transitions via a NavHost and intuitive bottom navigation that ensures a frictionless user experience.

Most importantly, the student successfully validates the app's technical architecture by demonstrating the ViewModel in action; when a job search is filtered or an application is submitted, the data is shared across the state and reactively updates the interface. This confirms a professional grasp of state management, ensuring that users receive real-time feedback and live data updates. Furthermore, the inclusion of the official project title on-screen meets all branding requirements, resulting in a complete and technically sophisticated submission that serves as a powerful tool for social good.

Marks Awarded: 1 / 1
